Summary

Java Full Stack Developer skilled in building **REST APIs** with **Spring Boot**, integrating **Generative AI** capabilities, and deploying **containerized applications** using **Docker** with automated **CI/CD** pipelines. Shipped 2 full-stack projects, including a **Smart Email Assistant** powered by Google Gemini and a **URL Shortener** with a GitHub Actions deployment pipeline. Seeking a Java Full Stack Developer role to contribute to scalable, high-performance web applications.

Technical Skills

Programming Languages: Java, Python, SQL

Core Java: OOP, Collections Framework, Exception Handling

Backend Development: Spring Boot, Spring MVC, Spring Security (JWT, OAuth 2.0)

Databases & ORM: MySQL, Spring Data JPA, Hibernate

AI/ML: Spring AI, RAG, LLM Integration, Generative AI

Infrastructure Tools & Platforms: Git, GitHub, GitHub Actions, Docker, Maven, Postman

Development Practices: Unit Testing, Debugging, Code Reviews, Agile/Scrum, API Testing

Experience

Hexaware Technologies

Jan 2025 – Jun 2025

Remote

Graduate Engineer Trainee – Spark Program, HexaVarsity

- Built a **Student Rental Management System** as part of a training-based evaluation program under Hexaware's **Spark Program**, designing the data model and **REST API** layer across student, property, rental, and booking modules.
- Implemented **CRUD** operations across related entities, applying request validation and error handling for data consistency.
- Structured the application using a **service-layer architecture** to separate business logic from data access.

Projects

Smart Email Assistant | Java, Spring Boot, Google Gemini, Chrome Extension

[Live Demo](#) | [Source Code](#)

- Built a **Spring Boot REST API** integrating the **Gemini AI API** to generate contextual email replies in three selectable tones (Professional, Friendly, Casual).
- Shipped a **Manifest V3 Chrome Extension** using content scripts and **DOM manipulation** to embed an AI Reply button inside Gmail's compose window.
- Routed all **Gemini API** calls through the backend, keeping the API key server-side and resolving **CORS** conflicts between extension and server.

URL Shortener Application | Java, Spring Boot, Hibernate, GitHub Actions, Docker

[Live Demo](#) | [Source Code](#)

- Built a full-stack URL Shortener (**Spring Boot** backend + Vanilla JS frontend) supporting URL creation, redirection, expiration, click tracking, and deletion.
- Modeled and persisted URL and click-analytics data using **Spring Data JPA** and **Hibernate**, serving the frontend directly from Spring Boot.
- Containerized with **Docker**, deployed to **Render**, and built a **CI/CD pipeline** in **GitHub Actions** to automate build, test, and image verification on every push.

Education

D. Y. Patil College of Engineering and Technology

Kolhapur, India

Bachelor of Technology in Computer Science

Dec 2021 – June 2025

AccioJob (Training Program)

Pune, India

Java Full Stack Development

Sep 2025 – Present

Certifications & Achievements

Oracle Cloud Infrastructure 2025 — AI Foundations Associate

Solved **200+** **Data Structures & Algorithms** problems on **LeetCode**, strengthening problem-solving and coding proficiency

Maintained **300+** contributions on **GitHub** in the past year across **26+** public repositories
